## Declaration on Low Halogen and Industrial Regulated Substances

Dear Customer,

Belden is aware of its responsibility about environment and human health. Therefore, hazardous, or potentially harmful substances are tested and controlled in our products in addition to our audited supply chain.

Hirschmann products meet the EU RoHS requirements for Polybrominated Biphenyls (PBB) and Polybrominated Diphenylether (PBDE). Any residues that may remain do not exceed a maximum concentration value of 1000 ppm. Additionally, the Hirschmann products are compliant to EU REACH SVHC (224 substances).

Nevertheless, it cannot be excluded that Hirschmann products might contain Bromide, Chloride and Fluoride above 900 ppm.

It is unknown if Latex or animal by-products are used in our products. Bisphenol A (CAS No.: 80-05-7) might be present above 50 ppm but below 1000 ppm in some products.

Best regards

**Hirschmann Automation and Control GmbH**
